

FO Tech Solutions

Data, Integration & Systems Engineering

We build, connect, and migrate the data systems businesses run on.

WHO WE HELP

Founders, operators, agencies, and teams who need senior technical help building, connecting, and migrating their core systems. We work with early-stage startups and established companies across a range of industries. You get one partner for the whole stack instead of coordinating several vendors, with clear documentation and steady communication throughout.

WHAT WE DELIVER

- **Data engineering & pipelines:** ETL/ELT and reliable data flows across Fivetran, Azure, Databricks, and AWS into Snowflake, BigQuery, and Redshift.
- **Data migration & conversion:** legacy-to-modern moves with mapping, validation, deduplication, and clean cutover.
- **API & EDI integration:** REST, GraphQL, SOAP, webhooks, and X12 to connect the tools you already use.
- **BI, dashboards & reporting:** Power BI, Tableau, Looker, and operational reports people rely on day to day.
- **CRM & platform setup:** HubSpot, Salesforce (with CPQ & Billing), Zoho, and Zendesk, configured around how your team sells and supports customers.
- **Web & application development:** full-stack custom builds on Supabase, Vercel, and similar tools.
- **AI enablement:** Claude Code onboarding and AI workflows that cut time out of repetitive work.

WHY FO TECH SOLUTIONS

- **One partner across the whole stack:** data, integrations, apps, and reporting, handled together.
- **Cross-industry experience:** finance, insurance, logistics, SaaS, legal, and more.
- **Senior, independent, and remote:** serious technical depth, scoped per project, without the cost of a full-time hire.
- **Security-driven engineering** background (M.S. Computer Science), so security and reliability are handled from the start.

HOW WE WORK

Every engagement is scoped to your goals and documented clearly. Work is delivered as independent professional services: fixed-scope or hourly, remote, and covered by a Master Services Agreement.

LET'S SCOPE YOUR PROJECT Tell us what you're building, or where a system is stuck. Most engagements start with a short discovery call and a written scope.
